FPT-100

Greetings!

For those of you in the United States, Happy Memorial Day!

As I think about spending time with family and friends, barbecuing and eating up a storm, I'm also thinking about how many of you are involved in the food processing industry, whether on land or at sea.

So this month's article gives you a general overview of how bioremediation products can help keep your food safe and your environment clean. You might be surprised at how easy it is to start using these natural, eco-friendly bacteria-eating microbes in your everyday operations.

If you have any questions, just give me a shout at 919-740-0546!

John

Featured Article: Food Processing: How Bioremediation Products Help Fight Harmful Contaminants

From restaurant and cafeteria owners to ship and yacht owners, any company that uses industrial food processing in their operations needs tough, work-ready solutions to help keep food, people, and the environment clean and safe.

Delta Airlines Update

SpillAway+

Thirteen years ago, Greg Cox, PSA and Environmental Coordination for Delta Airlines who is responsible for making sure Delta meets strict guidelines for environmental standards, attended a seminar where he was first introduced to Spillaway+.

Figuring the best way to see what these products actually do, Cox and his associate formulated a test that would provide surprisingly astonishing results. Sitting back behind the facility was an old machine that had been sitting for years with quite a build-up of grease, gunk and other grimy contaminants.

By combining both SpillAway+ and FleetKleen to produce a paste-like substance, they spread it over the old machine and let it sit. Then they sprayed the machine with water (as water is necessary to activate the microbes) and walked away.

FleetKleen

That night it rained heavily and **when they returned the next morning to their facility, to their utter amazement, the machine looked brand new.** Any old and existing residue from the machine had been completely removed. To them, having seen what the machine looked like before and afterward was just amazing.

"I became a true believer," states Cox. "And I recommend these products to lots of folks. I know it's just too good to be true, but when you see it for yourself, you can't deny its effectiveness. **This doesn't require any heavy cleaning and you don't have to sweep or pick up the residue and have it hauled away."**

Titanic Story

I'm happy to announce that my assistant, Kathy Smith, recently had an article published by *Reader's Digest* Canada in April on the 2010 expedition to *Titanic* which reveals the plans to virtually raise the wreck in 3D and create the first-ever archaeological map.

About Environmental Solution, Inc.

We care as much about the environment as you do.

That's why we're committed to helping companies in the marine, industrial, food manufacturing, transportation and aircraft industries enhance their environmentally-conscious green strategies with our superior bioremediation cleaning supplies that have a wide array of cost-effective and time-saving applications.

We are also a manufacturer's representative for our product line. Our primary goal is to build a network of successful distributors, both nationally and internationally for our product line.

If you want to keep your people safe and your working environment as clean and green as possible while saving time and money, please contact:
